COMPANY HISTORY

Coastal Design was formed in September 2001. Our objectives are Engineering and prototyping services. We have in excess of 20 years of hardware and software experience.

1.SOFTWARE: Our range of software support and development range from micro controller based products to windows based applications.

2.HARDWARE: We offer designs based on customer inputs and provide prototype boards and/or systems. We also offer production runs of both.

3.SYSTEMS: We can perform integration and testing of our products to the end users system. Provide us with your specifications and we will develop the hardware/software required to meet your needs.

CAPABILITIES

- Bus interfaces: ISA, VME, Serial, GPIB, TCPIP

- LabVIEW, Assembler, PICBasic, C, C++, JAVA, CGI programming (PC/MAC/Microcontrollers)

- Hardware design: Analog, Digital, Microcontroller based, Precision Instrumentation, VME card design, VME based test system design

- Micro support: Microchip products, 8051, 87C196, 8097) Other micros can be used for development.

- FPGA/CPLD Firmware programming (Lattice, Xilinx, Actel)

- Website development
